CAM FILTER-GRIP WRENCH

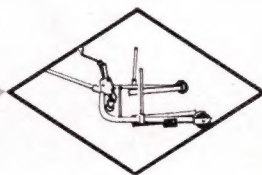

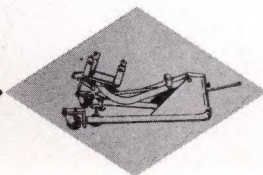

**for sure, easy replacement of cartridge-type
oil filters on late model cars**

- Engineered to give positive grip on "frozen" filters.
- "Won't Turn" filters mean no oil change, no oil filter sale—loss of business.
- **WARNING**—screwdrivers, chain wrenches or other inadequate tools may damage castings—then you're responsible.
- Goes on easy . . . can't slip . . . grips all around—presto, it turns!
- No dents, no time loss, no skinned knuckles—it's fast; it's positive.

Cartridge-type oil filters—standard on most late model vehicles—tighten automatically because of heat and oil. Very often "freeze." As a result, filter sales and oil changes are lost. The new CAM FILTER GRIP WRENCH removes filter in a jiffy.

Model No. 800
